### SHAKTI SKT-03GL Rotavator (Tractor-mounted) [ Commercial Test ]

#### 1. SCOPE OF TEST

The scope of test was to check and assess the following: -

#### LABORATORY TEST:

- Checking of specifications
- Hardness of soil engaging parts (Rotavator blades)
- Chemical analysis of critical components (Rotavator blades)
- Wear analysis of critical components

#### 12 FIELD TEST:

- Rate of work
- Quality of work
- Ease of operation, maintenance and adjustments
- Labour requirement
- Defects, Breakdowns & Repairs

#### 2. METHOD OF SELECTION

The implement was directly submitted by the applicant for test at this Institute, hence method of selection is not known.

#### 3. TEST PROCEDURES

i) IS: 6690-2002 : Specification for blades for rotavator for power tillers

ii) IS: 4931-2004 : Agricultural tractors-Rear Mounted PTO

iii) IS: 4468 – 1997 (Pt-I) : Agricultural wheeled Tractors- Rear Mounted three point linkage.

iv) IS: 11531-2001 : Test code for puddler

#### 4. SPECIFICATIONS

#### 4.1 General:

Manufacturer : M/s Pace Agro Pvt. Ltd.

401 - Ratan Esquire Building

14/143 Chunniganj

Kanpur (U.P.) – 208 001

Name of machine : Rotavator

Type : Tractor-mounted, Gear drive

Imp. 87/130

# SHAKTI SKT-03GL Rotavator (Tractor-mounted) [ Commercial Test ]

15

## 9. EASE OF OPERATION & ADJUSTMENTS

- 9.1 The propeller shaft has two telescopic sections, to shorten or lengthen the drive shaft.
- 9.2 Depth adjustment can be made by raising or lowering the skids.
- 9.3 The propeller shaft is provided with shear bolt for safety during overload.
- 9.4 Implement does not have provisions to vary rotor shaft speed to cater to different soil and moisture conditions.
- 9.5 Dipstick is not provided on the primary reduction gearbox for checking the level of lubricant.

## 10. DEFECTS, BREAKDOWNS AND REPAIRS

- Backlash between the drive pinion and the bevel gear of primary reduction gear box was adjusted by inserting shims in between bevel gear and the taper roller bearing.
- 10.2 Excessive wear of universal joint of the propeller shaft at tractor PTO end was observed after 18.1 hours of operation. Universal joint was replaced with the new one.
- 10.3 Presence of mud and water was observed in the secondary reduction gearbox after completion of 41.7 hours of operation.

### 11. COMMENTS AND RECOMMENDATIONS

- The specifications of implement hitch does not conforms to the IS: 4468 (Pt-I)-1997. Hence, it Indian standards.

  The dimensions of implement should be provided with the hitch conforming to relevant
- The dimensions of splined end of input shaft and propeller shaft insert dimensions do not

  The grade and share a share and share a share and share a s
- The grade and change period of oil used in gear boxes of rotavator, should be given in the printed literature and suitable sticker should also be pasted on rotavator.

  No direction has the
- No dipstick has been provided on the primary reduction gear box for checking the level of oil there into. This needs to be looked into for appropriate action.

Imp. 87/130 SHAKTI SKT-03GL Rotavator (Tractor-mounted) [Commercial Test]

- Hardness and Chemical composition of rotor blades do not conform to relevant Indian Standards. This needs to be looked into for corrective action.
- Improper gear meshing was observed in between drive pinion and bevel gear of primary reduction gearbox. Suitable modification should be done for corrective action.
- Presence of mud and water was observed in the secondary gearbox. Proper sealing therefore, must be provided.
- 11.8 Size of implement, power requirement, etc. should properly be indicated on the labeling plate.
- It is recommended that arrangement for changing the rotor speed to suit various soils and moisture condition should be provided.
- 11.10 Adequacy of literature: It is recommended that operator's manual, service manual and spare parts catalogue should be provided in English, Hindi and other regional languages as per IS: 8132-2004.
